<tbody>
<tr>
<td>IV/IO access</td>
<td>Cardiac Monitor</td>
</tr>
</tbody>
</table>
| Pain 5 out of 10 or greater and SBP > 90 mmHg | **Fentanyl**  
- IV/IO - 1 mcg/kg over 1 minute, OR IN/IM – 1mcg/kg  
- Max single dose 100 mcg  
- May repeat q 5 minutes for persistent pain to a max total dose 200 mcg  
- Repeat doses should be administered IV/IO if vascular access obtained  
If Fentanyl unavailable;  
**Ondansetron (for patients 4 years old and older)**  
- IV/IM/ODT – 4 mg  
- Repeat x 1 in 10 minutes for nausea or > 2 doses of Morphine  
**Morphine**  
- IV/IO - 0.1 mg/kg over 1 minute  
- Max single dose 10 mg  
- May repeat ½ initial dose x 2 q 5 min  
- OR  
**Morphine**  
- IM - 0.1 mg/kg  
- Max single dose 10 mg  
- May repeat ½ initial dose x 2 q 15 min  

### Base Hospital Orders only

Consult with ED Physician when orders are needed for interventions within scope but not addressed in policy.

### Additional Information
1. Consider administering ½ normal dose of Opiate pain control;  
   - Patients 65 years of age and older  
   - Patients with past adverse reaction to opiates  
   - Patients with suspected cardiac ischemia or active TCP  
   - Patients with traumatic injuries who are at risk for hemodynamic decompensation
